

THIS PAGE IS DUE ON: 09/22/23

You will submit your Hypothesis and Variables on Archie on Friday, 9/22 by 11:59 pm.

HYPOTHESIS: AN EDUCATED PREDICTION ON WHAT THE OUTCOME OF THE EXPERIMENT WILL BE; BASED ON BACKGROUND RESEARCH

Directions: write out your hypothesis for your science fair project on the lines below.

Hypothesis Self-Grading Checklist: Check the box if your hypothesis meets the criteria being described.

- ☐ the hypothesis predicts what will happen to each test group
- ☐ the hypothesis supports the prediction with what was learned from the background research

THIS PAGE IS DUE ON: 09/22/23

You will submit your Hypothesis and Variables on Archie on Friday, 9/22 by 11:59 pm.

VARIABLES: OUTLINES HOW THE EXPERIMENTAL SET-UP WILL BE CONTROLLED. THERE ARE FOUR VARIABLES:

- Independent Variable: the one characteristic that is different between all test groups
- Dependent Variable: the measurements being made / data being collected
- Constants: all the characteristics that will remain the same between the test groups
- Control Group: the one test group that is under normal conditions

Directions: write out your variables for your science fair project. All experiments must have all four variables identified.

★ Independent Variable:

★ Dependent Variable:

★ Constants:

★ Control Group:

Variables Self-Grading Checklist: Check the box if your variables meets the criteria being described.

- ☐ I only have one independent variable
- ☐ the independent variable identifies what is different between my test groups
- ☐ the dependent variable identifies what is going to be measured as the experiment is done
- ☐ the constants list all characteristics that will be the same amongst all test groups
- ☐ the control group identifies the one test group that is under normal conditions
