Create your own statement about the drawing that is an **inference**.

Observation vs. Inference WS

Knowledge about behavior must, in so far as possible, be based on objective observation, evidence, and data. Often assumptions and inferences should be avoided, and great care should be taken to limit one's conclusions about behavior to what we have observed rather than forming interpretations of what we have observed. Put an "O" by each statement that you believe is an observation and put an "I" by each statement which includes an inference or interpretation.

- _____ 1. The man in the drugstore fell to the floor clutching his chest and the other customers turned in his direction when he screamed.
- _____ 2. The pigeon which had been pecking at the disk was distracted by the sound of the door slamming, and it hesitated while it considered whether to keep pecking or not.
- _____ 3. When the dinner with her boyfriend's parents was over, she was so anxious to leave and go home that she left her coat behind.
- _____ 4. The old man looked both ways several times before he stepped off the curb and slowly walked across the street.
