

## **Research a Famous Mathematician**

For this math project, students will research a famous individual or civilization and their contributions to the field of mathematics and create a profile that they will present to their classmates.

Students will start by selecting a mathematician or civilization and then researching key facts and details such as biographical details, historical context, and major contributions. Students can then create a presentation that profiles their mathematician that includes an image or portrait, key information, and fun facts.

Students can work individually or in group of 2 or 3 students.
